SIEMENS ENERGY AG

Xetra: ENR | Grid equipment, gas turbines and service, wind turbines, industrial compressors | Frankfurt

Tommy Lau | 28 October 2026 | Initiation of coverage | Independent research

LONG	**Target price:** €160	**Last price:** €128.58 (Xetra close, 27 October 2026)	**Upside:** +24%

Siemens Energy's grid order book keeps growing faster than its factories can empty it. At €128.58, the market pays little for that.

Siemens Energy makes power transformers, switchgear and HVDC links in Grid Technologies, gas turbines and their service in Gas Services, compressors in Transformation of Industry, and wind turbines in Siemens Gamesa. My piece of 28 October argued that by its own estimate the transformer shortage in Europe and North America narrows to 2030 but never closes, so Grid's pile of waiting orders keeps growing.

The claim holds. Grid took orders at 1.88 times its revenue in the nine months to June, and its backlog rose to €51bn. The shares have fallen 31% from their April record on doubts about AI spending. On my numbers the price values Grid at about 13 times my fiscal 2027 estimate of its profit before special items, if the rest of the group is valued at my base multiples.

My call: LONG, medium conviction, 12-month target €160. My base sum of the parts is worth €163, up 27%, inside a range of €98 (down 23%) to €218 (up 69%). The target is my probability-weighted value, rounded, up 24%. Siemens Gamesa is valued at close to nothing after the cash it still has to burn.

Stock data

LAST PRICE
€128.58, Xetra close 27 October 2026; record close €187.62 and intraday high €191.66, both 24 Apr 2026; lowest close of 2026 €118.68 (23 Oct)

MARKET VALUE
About €107.5bn on 836.4m shares outstanding (derived: issued shares less treasury shares, after buybacks to 27 Oct)

BALANCE SHEET, 30 JUN 2026
Adjusted net cash €7.7bn; customer advances and other contract liabilities €28.1bn

FY2026 OUTLOOK (CONFIRMED 30 SEP 2026)
Comparable revenue growth 14 to 16%; margin before special items 10 to 12%, towards the upper end; net income about €4bn

GRID TECHNOLOGIES
Backlog €51bn at 30 Jun 2026; orders 1.88 times revenue in the nine months; Q3 margin 19.9%

GRID IN MY VALUE
53% of my sum of the parts; Gas Services 39%

CONSENSUS (STOCKANALYSIS.COM)
FY2027 EPS €6.25; average target €192.55 (28 analysts)

NEXT EVENT
Q4 and FY2026 results, FY2027 outlook and FY2030 targets, 11 November 2026 (confirmed by Siemens Energy)

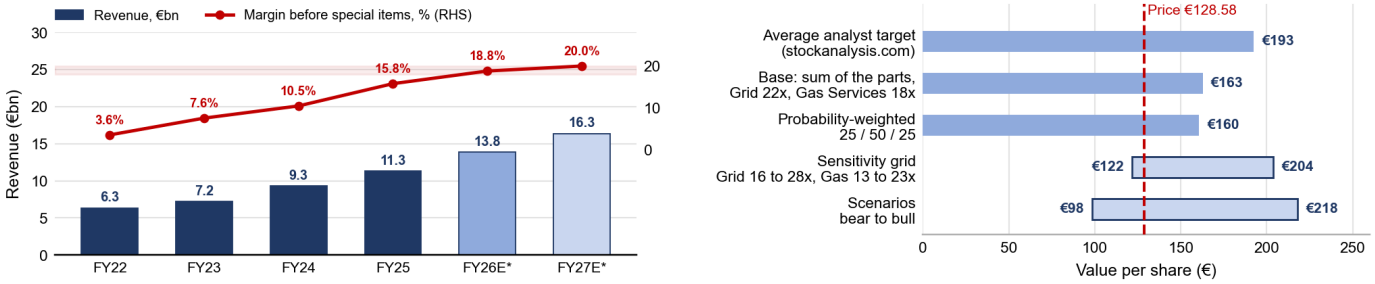

Key financials (fiscal years to September; profit before special items is Siemens Energy's measure)

€bn unless stated	FY2024A	FY2025A	9M FY2026A	FY2026E*	FY2027E*	FY2028 target
Grid revenue	9.3	11.3	9.7	13.8	16.3	high-teens CAGR
Grid margin before SI (%)	10.5	15.8	18.3	18.8	20.0	18 to 20
Grid orders / revenue (x)	2.25	1.90	1.88			
Gas Services revenue		12.2	10.3	13.9	16.3	mid-teens CAGR
Gas Services margin before SI (%)		13.0	16.6	16.2	18.0	18 to 20
Siemens Gamesa margin before SI (%)		(13.1)	(0.2)	(0.1)	2.0	3 to 5
Group revenue		39.1	31.4	43.4	49.0	low-teens CAGR

Group profit before SI	2.36	3.95	5.31	6.94	margin 14 to 16%
EV / group profit before SI at €128.58 (x)			19.5	15.0	

**FY2026E and FY2027E are my own estimates, not Siemens Energy's; FY2026 results are due on 11 November 2026. Actuals from the shareholder letters of 13 November 2024 and 14 November 2025 and the Q3 FY2026 release of 5 August 2026. FY2028 targets from the Capital Market Day of 20 November 2025 (revenue growth is a compound rate from FY2025, comparable basis). EV is market value less adjusted net cash and equity-method investments at book, plus minorities at 15 times their earnings.*

Two charts: Grid's earnings path, and a valuation that sits above the price

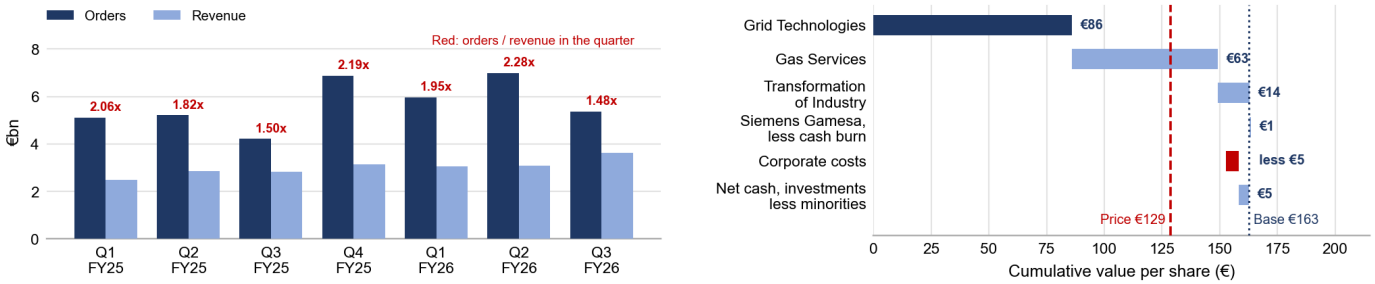

Left: Grid Technologies revenue and margin before special items; FY26E and FY27E are mine; the shaded band is the FY2028 target of 18 to 20%. Right: value per share from the base case, the weighted cases, the sensitivity grid and the bear to bull range, against the €128.58 price (red) and the average analyst target.

The thesis: a bath that keeps filling, inside a group with four taps

Picture the bath from the piece. The tap runs harder than the plughole can drain, so the water rises. The industry is widening the plughole, nearly doubling it on Siemens Energy's chart, but demand keeps turning the tap up. By 2030 the tap runs only a little faster than the drain, so the water rises more slowly. It still never falls.

For an investor the water level is visibility. Each litre in the bath is revenue already sold, and new orders arrive at today's prices while the old, cheaper ones drain out. That is why Grid's margin has risen every year, from 3.6% in fiscal 2022 to 15.8% in fiscal 2025 and 19.9% in the June quarter. Siemens Energy credits the "improved margin profile of the processed order backlog".

Left: Grid Technologies orders and revenue by quarter, €bn; red figures are orders over revenue. Sources: earnings releases of 11 February, 12 May and 5 August 2026 (with prior-year quarters) and the Q4 FY2025 shareholder letter. Right: my sum of the parts per share, built up part by part, against the price (red) and the base value (dotted).

The claim holds on every test it set. Grid's orders were 2.25 times its revenue in fiscal 2024, 1.90 times in fiscal 2025 and 1.88 times in the nine months to June 2026. Its backlog rose from €33bn in September 2024 to €42bn a year later, then €45bn, €49bn and €51bn in the three quarters since. Even if Grid booked nothing in the September quarter, its fiscal 2026 orders of €18.3bn to June already exceed my estimate of the full year's revenue, €13.8bn. In the transcript it published of its pre-close call on 30 September, Siemens Energy said Grid booked no HVDC project in that quarter, so orders stayed "similar to previous quarters". Nothing I found shows the piece was wrong.

The piece's caveat still stands. Grid's backlog is global and includes long HVDC projects, while the chart covers transformers in Europe and North America. The pre-close call supports the link: order momentum is "led by the product business, particularly large power transformers", with Europe and North America the strongest regions.

The investment case needs one more step. Grid is about half of what I think Siemens Energy is worth. Gas Services, which makes and services gas turbines, is about two fifths. Siemens Gamesa, the wind business, made its first quarterly profit since 2022 only in the June quarter. So the question is what the price says about each part.

Variant perception: what the market prices in, and where I differ

At €128.58 Siemens Energy is worth about €107.5bn on 836.4m shares, my count after the buybacks. Adjusted net cash, less the buybacks paid since June, plus equity-method investments at book, less minorities at 15 times their earnings, add about €3.8bn. The enterprise value is about €103.7bn: 19.5 times my fiscal 2026 estimate of profit before special items and 15.0 times my fiscal 2027 estimate. The shares trade at 20.6 times the €6.25 fiscal 2027 consensus EPS on stockanalysis.com.

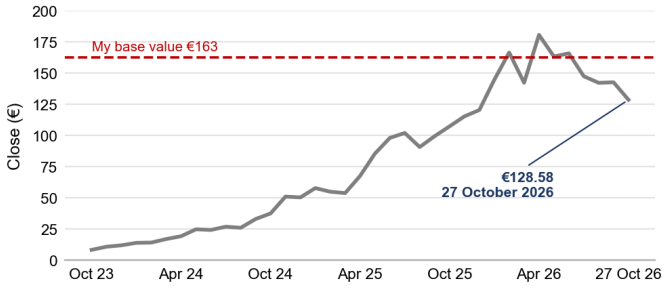

What the price implies. With Gas Services at 18 times, Transformation of Industry at 14 times, Siemens Gamesa at close to nothing and corporate costs capitalised, the price leaves about €43bn for Grid. That is 13.3 times my fiscal 2027 estimate of its profit before special items. Grid equipment peers trade at a median of 20.8 times trailing EV to EBIT. Put the other way, with Grid at 22 times the price leaves Gas Services at 8.3 times. The market is not paying for both engines at once.

The shares fell 31% from the April record, and 8.6% on 22 October alone, when a Barclays sector study questioned the pricing power of AI equipment makers and doubts about AI spending hit the sector. Barclays has rated the shares underweight with a €130 target since July. The average target of 28 analysts is €192.55, but most predate the fall. I differ on three points.

Grid's pile is not an AI bet. At its 30 September pre-close call, Siemens Energy said data centres are "additive" for Grid but "not its foundation": regulated grid investment, the replacement of 30 to 40 year old assets and interconnection are. Its own chart counts a transformer shortage in Europe and North America through 2030. A slowdown in AI spending would slow the pile's growth; on the chart, it would not drain it.

I do not need consensus to be right. My fiscal 2027 estimates give EPS of about €5.92, below the €6.25 consensus. They assume Grid grows 18% at a 20% margin, the top of its fiscal 2028 range a year early, and Gas Services 17% at 18%. On those numbers the base value is still 27% above the price.

The wind business is priced as a drag, and I price it the same. Siemens Gamesa burned €1.7bn of free cash flow before tax in the nine months to June. I value its fiscal 2027 profit at 10 times and deduct €1.5bn of cash still to burn, which leaves about €0.6bn. The base case does not need the turnaround.

Date	What happened	Move
14 Nov 2025	FY2025 results; FY2028 targets raised	up 9.4%
11 Feb 2026	Q1 FY2026 results	up 8.4%
12 May 2026	Q2 FY2026 results; FY2026 outlook raised	down 5.1%
5 Aug 2026	Q3 FY2026 results	unchanged
22 Oct 2026	Barclays study on AI equipment pricing power, reported	down 8.6%

Left: Siemens Energy month-end close, October 2023 to the 27 October 2026 close, against my base value (red). Yahoo Finance, retrieved 28 October 2026. Right: moves from the previous close to the close on the day; Siemens Energy releases results before the market opens. The 22 October move as reported by German financial press.

Valuation, with the working

I value Siemens Energy as a sum of its parts. Each business is valued at a multiple of my fiscal 2027 profit before special items, the year to September 2027, which will be the latest full year by October 2027. So I set the multiples against peers' trailing EV to EBIT. Siemens Gamesa is valued separately as a drag. I add adjusted net cash at 30 June less buybacks since and equity-method investments at book, deduct minorities at 15 times their earnings, and divide by 836.4m shares.

My fiscal 2026 estimates add my September quarter to the nine months reported, inside segment revenue guidance on a comparable basis: Grid €13.8bn of revenue at 18.8%, Gas Services €13.9bn at 16.2%, Siemens Gamesa at break-even. My Gas Services margin (16.2%) and group margin (12.2%) sit just above the top of the guided ranges, as the nine months' 16.6% and 12.6% already do. For fiscal 2027, Grid grows 18% at 20%, Gas Services 17% at 18%, Transformation of Industry 6% at 13% and Siemens Gamesa 4% at 2%. Corporate costs stay at €0.3bn. All are my estimates.

Sum of the parts, base case

Part	FY2027E profit before SI, €bn*	Multiple	Value, €bn	Share	Per share
Grid Technologies	3.27	22x	71.9	53%	€86
Gas Services	2.93	18x	52.8	39%	€63
Transformation of Industry	0.82	14x	11.5	8%	€14
Siemens Gamesa: profit at 10x, less €1.5bn cash burn	0.21	10x	0.6	0%	€1
Corporate costs	(0.30)	15x	(4.5)	(3%)	(€5)
Net cash, investments, less minorities			3.8	3%	€5
Equity value			**136.1**	**100%**	**€163**

**My estimates; brackets are negative. Grid at 22x against a grid equipment median of 20.8x trailing EV/EBIT (22.4x without Hitachi), for faster growth and a higher margin. Gas Services at 18x, below Mitsubishi Heavy (21.5x) and Baker Hughes (20.9x), because its new-unit pricing is at a cycle high. Transformation of Industry at 14x. Siemens Gamesa at 10x against Vestas at 15.5x, less €1.5bn of cash I expect it to burn before it turns cash positive. Corporate costs capitalised at 15x.*

Scenarios: three cases, twelve months out

Case	What happens	Grid FY2027	Grid x	Gas x	Gamesa	Value	Change
Bear	Grid grows 12% at 18.5%; Gas 10% at 16%; Gamesa breaks even but burns €3bn	€2.87bn	16x	13x	minus €3.0bn	€98	down 23%
Base	Grid 18% at 20%; Gas 17% at 18%; Gamesa 2% margin	€3.27bn	22x	18x	€0.6bn	€163	up 27%
Bull	Grid 22% at 21%; Gas 20% at 19%; Gamesa 4% margin	€3.55bn	27x	22x	€4.2bn	€218	up 69%
Weighted	**25 / 50 / 25**					**about €160**	**up 24%**

Grid and Gas Services grow from my FY2026 estimates. Transformation of Industry keeps my FY2027E profit at 10x, 14x and 16x. Corporate costs, the bridge and the share count are the same in every case. The bear multiples sit below every grid and gas peer on trailing EV/EBIT; the bull Grid multiple is still below Eaton (31.1x).

Sensitivity: Gas Services multiple against the Grid multiple

Gas \ Grid	16x	22x	28x
13x	€122	€145	€169
18x	€139	**€163**	€186
23x	€157	€180	€204

With my fiscal 2027 profits and everything else at base, 8 of the nine cells sit above the price and 6 sit 15% or more above it. Only the corner with both multiples low, 13 times Gas and 16 times Grid, falls below it, at €122. Under my rule a long needs the base value 15% or more above the price. At 27% above, my call is long.

Peer landscape

Company	Ticker	Forward P/E	EV/EBIT	What they make
Siemens Energy	Xetra: ENR	22.1x	26.8x	Gas turbines and service, grid equipment, wind turbines, industrial compressors

Risks: what would hurt the view

The gas cycle turns. Gas Services is about two fifths of my value and its new-unit pricing is at a cycle high. Siemens Energy expects lower gas orders in the September quarter and says to judge them over a full year. If data centre projects stall, slot reservations may not convert. It says none have been delayed or cancelled so far.

Grid's price rises stop. At the same call Siemens Energy said European grid pricing has "stabilized at a high level" and that further margin gains will come from execution and utilisation. My 20% Grid margin for fiscal 2027 needs that execution.

Siemens Gamesa. Offshore orders for fiscal 2026 came in below plan and moved into fiscal 2027. It still booked €189m of negative special items in the nine months to June. My bear case has it burn €3bn more.

The cash is partly customers' money. Contract liabilities, mostly customer advances, were €28.1bn at 30 June. If orders slow, advances unwind and the €7.7bn of adjusted net cash would shrink.

Currency and policy. Siemens Energy reports in euros and much of its order growth is in the US, so a weaker dollar cuts reported growth. A US executive order on bulk-power equipment is not yet detailed. Siemens AG held 5.54% of the voting rights after a sale, according to its notice of 2 April 2026 published via Deutsche Boerse.

Capacity timing. Siemens Energy last dated Charlotte to early 2026; a press report says it slipped by a year to 2027. Nuremberg's expansion runs to 2028. A slip delays revenue, though it also keeps the pile growing.

What would change my mind

Into no call: a price above about €141.5, where my base value would sit less than 15% above it, or a fiscal 2027 Grid outlook on 11 November below high-teens growth or below an 18% margin. **Towards a short:** Grid's orders falling below its revenue, or a turn in gas orders large enough to cut my fiscal 2027 Gas Services profit by a third.

The view is wrong if: Grid Technologies' profit margin before special items for fiscal 2027 lands below 18 per cent, or its orders fall below its revenue in fiscal 2027, or Siemens Gamesa's free cash flow pre tax for fiscal 2027 is worse than minus €2 billion, or the shares close below €105 at any month end before October 2027.

Conclusion

The October piece argued that Siemens Energy's own chart shows the transformer shortage narrowing but never closing, so Grid's pile keeps growing. Its figures say so: orders at 1.88 times revenue in the nine months, a backlog of €51bn rising every quarter, and fiscal 2026 orders that already exceed the year's revenue. Nothing I found says the piece was wrong. The market has de-rated the shares on doubts about AI spending, and at €128.58 it pays about 13 times for Grid if Gas Services gets a below-peer multiple. My call: LONG, medium conviction, target €160; base value €163, range €98 to €218.

Appendix: forecast assumptions

Assumption	FY2026E	FY2027E	Basis
Grid revenue growth (nominal)	22%	18%	FY2026 guide 25 to 27% comparable; FY2028 target high-teens
Grid margin before SI	18.8%	20.0%	FY2026 guide 18 to 20%; Q3 19.9%
Gas Services growth and margin	14%, 16.2%	17%, 18.0%	FY2028 target mid-teens growth, 18 to 20%
Transformation of Industry	4%, 12.8%	6%, 13.0%	FY2028 target 12 to 14%
Siemens Gamesa	about flat, break-even	4%, 2.0%	FY2028 target 3 to 5%; €1.5bn cash burn to come
Bridge, €bn	3.81		Adjusted net cash 30 June less €1.26bn buybacks since; investments at book; minorities 15x
Shares, m	836.4		Issued 861.1m less treasury shares, derived from buyback reports
